DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-15, drawn to a photosensor element, classified in class 250, subclass 214.1.
 - II. Claims 16-30, drawn to an imaging device, classified in class 359, subclass 28.
 - III. Claims 31-37, drawn to semiconductor device, classified in class 257, subclass 233.
 - IV. Claims 38-42, drawn to a method of making a semiconductor device, classified in class 438, subclass 48.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions III and IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case a guard ring can be used to prevent photo carriers instead of biasing the storage node. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. Inventions I and II are two separate inventions as based on claims 1 and 16 for invention I refers to a ratio of capacitances per unit area to be at least of two orders of magnitude difference, while invention II refers to a ratio of C_P/C_D to be greater than 0.7.

The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as the photosensor element does not require switches in imaging devices. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
